Ram Sagar

.NET Full Stack Developer

+91-8002304578 | ramsagar78085@gmail.com | GitHub: https://github.com/ramsagarcode

PROFESSIONAL SUMMARY

- Full Stack Developer with hands-on training from the PGCP-AC (Post Graduate Certificate Program - Advanced Certification) program, with a basic understanding of C# and the .NET framework, and REST API development.
- Skilled in building end-to-end web applications using .NET Core (C#) backends together with modern front-end technologies (HTML, CSS, JavaScript, Angular).
- Familiar with relational databases including SQL Server and MySQL, with practical experience designing schemas and writing queries for full-stack applications.
- Strong foundation in Data Structures & Algorithms and Problem-Solving, with practical project experience developing a full-stack .NET-based employee management system.
- Good problem-solving and communication skills, with a positive, go-getter, and learning attitude, and a track record of expediting expectations to ensure on-time delivery.
- Quick learner with a Mechanical Engineering background, now transitioning into software development with a project-driven, detail-oriented approach.

EDUCATION

Durgapur Institute of Advanced Technology and Management **2018 – 2022**
Bachelor of Technology, Mechanical Engineering | CGPA: 8.56

Sabour College, Sabour, Bhagalpur **2015 – 2017**
12th (PCM) | Percentage: 51%

High School, Makwa **2014 – 2015**
10th | Percentage: 68.2%

CERTIFICATIONS & TRAINING

PGCP-AC – Advanced Certification Program **25 Feb 2026 – 11 Aug 2026**
Full Stack Development

- Covered C# and .NET fundamentals, REST API development, HTML, CSS & JS, and Data Structures & Algorithms (Problem-Solving).

PERSONAL PROJECTS

Employee Details App – Full Stack Employee Management System **2026**
C#, .NET Core, ASP.NET Web API, SQL Server, Angular, HTML, CSS, JavaScript, JWT Authentication

- Built a full stack employee management application with a .NET Core (C#) Web API backend and an Angular front end, supporting user authentication and CRUD operations on employee and department records.
- Designed RESTful API controllers (Employee, Department, Register, Auth) in ASP.NET Core to handle employee data, department data, and secure user registration/login.
- Implemented authentication and route protection using JWT-based authorization to secure API endpoints.
- Modeled and managed relational data in SQL Server, including Employee, Department, and Login/Register tables, with dedicated database connection and access layers.
- Structured the backend using interfaces (IEmpDB, IDeptDB, IRegAndLogin) and dependency injection, with request/error logging modules for monitoring and easier debugging.
- Built a responsive Angular front end to consume the REST APIs and provide a user-friendly interface for managing employee and department information.

TECHNICAL SKILLS

- Languages & Backend: C#, .NET Framework, .NET Core, ASP.NET Web API
- Frontend: HTML, CSS, JavaScript, Angular
- Databases & Tools: SQL Server, MySQL, REST APIs, JWT, Git & GitHub
- Soft Skills: Problem-Solving, Analytical Thinking, Communication, Teamwork, Adaptability.
- Coursework: Data Structures & Algorithms, Object-Oriented Programming, DBMS
